

UNIWEB PASS: ACCESS CONTROL MANAGEMENT FROM ANY LOCATION!

A comprehensive access control system is the ideal instrument to manage the access to your company's buildings and premises in an efficient manner. With the 'Uniweb Pass', IDtech introduces a revolutionary solution, based on the latest technologies. No need to install specific software on every workstation, thanks to the use of web technology. No need for your technical service people to waste time on maintaining and updating numerous workstations. In addition you can manage from any desired location! After all, it is sufficient to login to the Internet with a password, after which you can execute your access management with only a few mouse clicks. Who of your personnel has entered or left the building or certain premises, and when? Who of your employees is present on the premises? What is the status of the doors? Who has access to which rooms? These are only a few of the multitude of possibilities...

But there's more! The security officer or the security manager can also remotely set or adjust the access control system. Just think of examples such as changing the rights or authorizations, granting access facilities to new employees, the layout of credentials (and in the case of theft, annulling the privileges of a card that disappeared), etc. What's more, the 'Uniweb Pass' is also an excellent reporting tool. On the basis of different criteria you can call up historical reports: who has entered or left the company's premises, generated alarms, status of the doors, etc. The application also allows the call up a summary of those present and offers different possibilities to search for specifics in those lists. The manager has also access to the personal data of the users. With 'Uniweb Pass' you can also operate and manage the doors or groups of doors within your building. Last but not least, the module offers you a hardware network status (supervision of the controllers and readers) and enables management of programmed actions (automatic commands on the basis of planning).

It's quite evident that with this method you can reduce the administration in your company considerably and gain a great deal of freedom. Furthermore, in case of problems you can take adequate decisions more quickly and evacuate your personnel in no time. Any personnel member, who has a computer with an Internet or Intranet connection and who has the necessary security level, can use 'Uniweb Pass'. In addition, its modular architecture makes the system almost endlessly expandable, growing easily with your enterprise. Since 'Uniweb Pass' is installed on one central server, it can be smoothly integrated in your existing infrastructure. 'Uniweb Pass' is available in Dutch, French and English.

SOME STANDARD FEATURES

- Multi-lingual
- Individual login
- Access history
- Alarm history
- Rule attribution
- Attribution / restitution of temporary badges
- Personal record
- Table of the presences
- Door commands
- Door / alarm status
- Network status
- Management of the programmed actions
- Status of the information coming from the controllers

SPECIFICATIONS

Operating systems available	- Windows™ NT, 2000, XP
Main databases supported	- Oracle - Others on request
Multi-lingual	- Dutch, French, English - Others on request
Compatible Browser	- Explorer 5.0 or higher
Web Server	- I.I.S. 5 or higher
Mail	- SMTP
History	- 400 days (expandable)
Integration with	- UNIPASS Access Control
